About me

My name is Roland. I am currently studying web development. I am mostly interested in front-end development, that is why I chose to learn Javascript and React. I have a background in graphic design and I am also interested in UI and UX design, because I think that a good front-end developer should think in logic- and design-terms too. At the university I specialized in E-business which helped me to learn a lot about this area, from the Hungarian market leaders of startups and ecommerce businesses.

I believe that constant learning is the name of the game of today's rapidly changing world. luckily, by having a growth mindset, I find enjoyment and fulfilment in the process of continous learning and upskilling.

In my freetime, I love reading, studying and exploring new fields that interest me(such as blockchain technologies and cryptography, neurobiology, health and wellbeing, psychology, finances, UI and UX design), exercising, drinking quality green tea, travelling, spending time with friends, riding a motorbike, eating great foods or just chilling in a nice spot with a view. That's it for my brief introduction, if you are interested in more, don't hesitate to contact me!

Skills

Web Development

- HTML 5
- CSS 3
- Javascript
- React
- PostgreSQL
- Wordpress
- Joomla
- Shopify
